

Programming for AI: Environment Setup

Programming for AI: Setup Guide

1. Install Anaconda

Download and install the **Anaconda Distribution** from [anaconda.com](https://www.anaconda.com/)(<https://www.anaconda.com/>).

2. Create the Course Environment

Open the **Anaconda Prompt** (Windows) or **Terminal** (Mac/Linux) and run: ``conda create -n prog_ai python=3.11``

3. Install Required Packages

Activate the environment: ``conda activate prog_ai``

Install the computing and data stack: ``conda install numpy scipy pandas matplotlib seaborn statsmodels requests beautifulsoup4 lxml numba cython line_profiler spyder jupyter``

4. Choose Your IDE (Integrated Development Environment)

- **Spyder:**
- **PyCharm Community:**
- **VS Code:**

5. Verify Installation

Run ``python`` in your terminal and type: ``import numpy; import pandas; print("Setup Successful!")``

6. Submit Screenshot

Run `conda list` in terminal along with and running instance of spyder and take a screenshot and submit it on the portal.
